

BONE BREAKS

EVO NEUROLOGICAL THERAPY for BONE BREAKS

Evo Neurological Soft Tissue Therapy is a therapy system that targets the neurological origin and components of injury, allowing for **COMPLETE RAPID RECOVERY** and **ACCELERATED ELIMINATION** of **SYMPTOMS**. All injury is a direct result of the body's inability to absorb force. With everything we do, our body absorbs and generates force. In order to absorb force appropriately to maintain healthy tissue and avoid injury, muscles must fire in the appropriate order at the appropriate force and velocity. When a bone breaks, it means the body had a neurological inability to absorb that force. The nervous system was not able to communicate to the appropriate muscles fast enough in order to absorb force appropriately. Force does not simply disappear; if there is a neurological disconnect where muscles do not work efficiently, the force can be absorbed in the bone causing stress or breaks. Ideal therapy of a broken bone involves healing the bone efficiently and ensuring that a break does not happen again.

When we get injured or are in pain, the spot of injury is where the problem ended, not where it began. It begins with the neurological disconnect, simply where the muscle did not or could not do what it was supposed to do; therefore, the bone took the force and was damaged. In order to heal the bone rapidly and efficiently, unwanted inflammation must be eliminated, and there must be a constant surge & recycling of blood flow to bring healing components to the bone. From there, in order to ensure that the bone does not break again compensatory patterns leading to the break must be eliminated, establishing appropriate muscle memory. This is the process of Evo Neurological Therapy.

Neurological Soft Tissue Therapy is a three-part system that treats the neurological origin of injury. Simply treating where the problem ended will not take care of the neurological disconnects; and, recovery will be minimal, and the individual will still be prone to future injury. Treating the origin of injury will allow the body to absorb force as a whole, heal itself, and establish an elevated resistance to injury. It will allow the physiological symptoms to quickly **VANISH** and recovery to be dramatically accelerated! This is done by putting the body back into neurological balance, eliminating neurological disconnects and compensation patterns, and establishing appropriate 'muscle memory' in order that the body can work at high load, volume, and velocity.

If you have a bone break, do not hesitate to come to a **FREE CONSULTATION**.

In 2012, Briggs, varsity hockey, Elk River, MN, heals a broken radius in 2 weeks utilizing Evo Neurological Therapy. (typical recovery: 6-8 weeks)

UTILIZED BY:

NFL: 650+ Athletes

NBA: 200+ Athletes

MLB: 100+ Athletes

NHL: 200+ Athletes

MLS (European Soccer): 600+ Athletes

Olympians: 25+ MEDAL Winners

NCAA: 500+ NCAA Athletes
